

BATES CARGO PAK® CARGO PROTECTOR

Use

Cargo Protector is used to secure cargo, which is to be transported by container or road.

Materials

Cargo Protector consists of two layers of special high wet strength paper, ensuring maximum strength and low weight of the airbag. Inside is a three layer co-extruded high quality PE film, ensuring an ultimate airtight seal.

Valve

Cargo Protector is equipped with a patented valve, which allows very quick inflation. The valve is simple and easy to use.

Other airbag features

- Can withstand up to 90% relative humidity (RH) at 60°C.
- Has a very high wet strength due to the unique choice of materials and composition.
- Made entirely from environmentally friendly materials.
 - paper, film and valve components are 100% recyclable.
 - meets the European regulations regarding the content of heavy metals.
- Has a high friction value and therefore stays in place during transit.
- Fast inflation time.
- Very user friendly
